Solutions for a world in motion

AUMA-USA wins Natural Gas Opportunity

AUMA Actuators, Inc. (AUMA-USA) and **R.M. Headlee** secured an opportunity to install **AUMA** actuators with a natural gas company in western Pennsylvania. This customer operates 2,800 miles of pipeline and 130 compressor units between western New York and western Pennsylvania and is responsible for the transportation and storage of natural gas for customers in all segments of the natural gas industry.

AUMA-USA retrofitted a SAREx 10.2/GS 160.3 with AMExC 01.1 integral controls on a 12" AN-SI 300 Audco Plug Valve. The retrofit was completed in the field, which lessened the amount of time production was suspended.

The customer elected **AUMA** as the replacement supplier due to the unique plug & socket KES explosion proof conduit design as well as the 360° worm in the gear, which allows any installation configuration regardless of the valve position. Furthermore, **AUMA** was able to provide a double O-ring indicator plate seal that meets the requirements of IP68-8 (26 ft. of water for 96 hours). This rating helps eliminate water ingress concerns that could freeze and crack the housing. The simplicity of setting limit and torque switches as well as timely lead times also aided in winning this opportunity.

The successful installation was a team effort and made possible because of **R.M. Headlee's** vast knowledge of the oil and gas industry and **AUMA-USA's** modular, customizable and reliable product that is supported worldwide.

AUMA-USA is committed to being the world's leading manufacturer of electric actuators and gearboxes and appreciates the opportunity to be your preferred supplier.
